**1) Solve graphically and check:**

$y = 3$
$y - 6 = -\frac{1}{3}(x + 18)$

2) Solve with substitution and check :

$y = 5x - 4$
$7x - 8y = 131$

3) Solve with elimination:

$4x - 5y = 66$
$3x - 15y = 54$
