

Factor: $6x^2 + 5x - 4$

The coefficient for x^2 (A) is
not 1. So we can't start with:
 $(x \quad)(x \quad)$

Factor: $x^2 - 2x - 120$

Factor $x^2 - 2x - 120$ using **GROUPING**

Factor: $x^2 + 8x - 84$

Factor $x^2 + 8x - 84$ using **GROUPING**

Factor: $6x^2 + 5x - 4$ using **GROUPING**

Factor $6x^2 + 5x - 4$ using **GROUPING**

Introduction to Grouping

Factor using Grouping:

1) $12x^2 - 11x - 5$

2) $12x^2 - 32x + 5$

3) $18x^2 + 11x + 1$

4) $18x^2 + 5x - 2$

Introduction to Grouping

$$5) 24x^2 - 19x + 2$$

$$6) 24x^2 - 2x - 15$$

$$7) 20x^2 + 11x - 4$$

$$8) 20x^2 + 24x + 7$$
