

I failed a math test. Now what?

When I get the test back in class:

- I will pay close attention to all questions reviewed in class, even if it's one I answered correctly.
- If a question I answered incorrectly is reviewed, I will write down the correct answer in a margin or different color so I have it to look at later.

Tonight:

- In addition to my regular homework for the night, I will re-do any questions which were not 100% correct on separate paper using any review guidance given in class and my notes from the chapter.

In the morning:

- **I will attend one extra help session within the next 3 days to check my new answers.**
- **If my new answers are correct, I will let Mrs. French know that I've learned from my mistakes.**
- **If my new answers are not correct, I will work with Mrs. French to correct my mistakes and learn the proper way to solve the questions.**
- **If I am not available during H-period because of another class, I will see Mrs. French after school on Wednesday in room E-012 at 2:50.**

In the future:

- I will spend more time each night re-reading my notes, studying and completing my homework in a way that helps me learn.
- Any time a topic or homework assignment seems confusing, I will attend extra help the next morning. (Tuesday – Friday, 7:45, Room E-012)
- I will do all review sheets for future tests.

What I will NOT do:

- Ignore my mistakes
- Refuse to learn & grow
- Repeat the same mistakes in the future
- Ignore Mrs. French's review
- Blame others
